

Oracle Fusion Applications-Fusion Expense

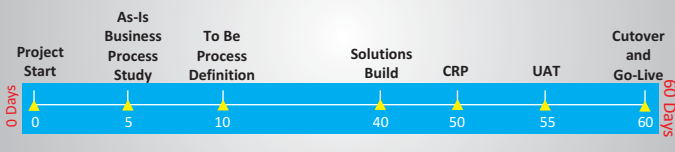

Customers want to automate their highly manual, time and cost-intensive travel authorization process and reimbursement process by using Oracle Fusion Expenses. The automation will allow employees to submit travel authorization requests online and enable managers to analyze, review, and approve (or reject) requests online. Employees can book their travel expenditure based upon the individual authorization. Once approved by the Manager based upon the policy it goes to Payable for Payment purpose. This automation will improve the company's travel and expense management process and reduce operational costs.

The current functionality in Oracle Fusion Expense (OFE) only covers the expense reimbursement part and not supports Travel requests / authorization Approval and integration with Payables specific requirement out-of-the-box. This also includes integrating Employee Master Data in EBS/PeopleSoft with OFE for Approval hierarchy, Identity Management (SSO) and unique code which can track the entire Process.

We have following choices to deliver this solution:

- Bolt-on "niche" application for travel authorization
- Extension and integration of a backend travel system with Oracle Fusion expense reimbursement system using BPM/SOA
- Build bi-directional Process/Data connectors

Oracle Fusion Expense Application Implementation Lifecycle

★ The above time-line is indicative of standard implementation and may change from case to case

Return on Investment (ROI)

World Class Oracle Fusion Implementations to be the top 15% in terms of results, progress against goals and current performance. World Class Oracle Fusion Implementations produce results such as:

- 15% reduction in operating costs
- 16% reduction in administrative cost
- 21% improvement in expense approvals-on time
- 19% reduction in expense log-in time
- 18% reduction in ageing expense approvals

HIPL All Inclusive Offerings :

About HIPL

We operate in partnership with the global IT major Oracle – the biggest provider of database technologies and applications across the world. Our array of services include: Business Process Study and Re-engineering, ERP implementations, Application Development, Database Design, Data conversion and migration to Systems Integration and Support.

Key Benefits

- ▶ **Affordability** - Reduce your total cost of ownership (TCO)
- ▶ **Rapid time to value** - Accelerate implementation with clearly defined project scope as well as industry best practices
- ▶ **A safe investment** - Establish a strong foundation for growth with a proven, scalable world-class application and state of the art technology
- ▶ **Reduced risk implementation** - Rapid implementation with clearly defined project scope and industry best practice and functionality

HIPL's Industry-Focused Expertise

Our Fusion application offering includes industry best practices and supporting business flows for specific targeted industries, making it easier to customize your Oracle implementation for your unique business and market requirements. HIPL's offering cover the following industries.

| | |
|------------------------------|--------------------------------|
| Media | Telecom |
| Hi-Tech | Consumer Package Goods |
| Discrete Manufacturing | Public Sector |
| Process Manufacturing | Banking and Financial Services |
| Healthcare and Life Sciences | Professional Services |
